How do we figure out what babies think?

We use babies' natural curiosity to learn how they perceive the world.

Your baby will sit on your lap and watch a short child-friendly video

We record how your baby's interest changes over time

You will be with your baby during the entire study

Most infant studies take 30 minutes

Infant and child scientists needed!

We are looking for infants and children up until the age of 5 years old. Our research investigates how infants and children think about the world around them.

The research lab is designed for children and is conveniently located at 147 Clove Road in the Center for Clinical Services.
